

Service. Support. Security.

The best partner for SMBs

Managing your SAP Business ONE infrastructure in a uniquely secure cloud. Our infrastructure streamlines business processes and protects your data within secure, cloud-based servers. As the industry's longest-tenured SAP Business One infrastructure provider, we've expanded across Europe, America, and Africa

with a focus on three core principles servicing companies from our datacenters located in Ireland, Spain, Portugal, Miami, Colombia & Chile.

SERVICE

Just simplifies your day-to-day while cutting costs!

Our managed cloud infrastructure saves you money by reducing your dependence on costly IT staff, reduces the possibility of network downtime leading to lost revenue, and frees you up to focus on business planning and strategy.

Teaming up with us means you're never alone during an emergency. Call, chat, email us and we will be there for you. Not that you'll need much support - our service includes inbuilt business and disaster recovery plans, and all of your administration up to the OS level will be taken care of by our dedicated tech consultants.

We'll also fully maintain and patch your SAP HANA infrastructure, so you can stay ahead of the latest tech innovations with automatic updates from our team.

For everyone that uses SAP HANA to drive their business, we are the high-functioning engine that makes sure you never break down. Technical issues that last even a day can have a huge effect on small businesses - so we're always on-hand to protect your investment within a world-class infrastructure.

high-functioning engine that makes sure you never break down

SUPPORT

Our customer care is second to none. You'll have ongoing access to dedicated, expert tech consultants, and we'll manage your day-to-day IT operations.

We pride ourselves on the strong relationships we build with our clients. We work around the clock to deal with Priority 1 issues (24X7 support) and for standard priority issues, we're available any time from 8:30am to 5:30pm GMT.

You'll have ongoing access to dedicated, expert tech consultants, and we'll manage your day-to-day IT operations.

SECURITY

With access to Tier III (or superior) datacentres, we protect your data within an intricate safeguarding system housed entirely on the cloud.

Protecting your data is costly, complicated, and takes a lot of resources to maintain. The process can put a huge financial strain on a business – forcing them to hire expensive IT staff and opening themselves up to liability if the infrastructure fails.

When you partner with us, you avail of our comprehensive suite of advanced security features and SAP certifications. Our Operations Specialists will maintain and patch your SAP Business One cloud, while protecting it in a highly secure datacentre with inbuilt physical and network safeguards.

You'll always have access to the latest feature upgrades and testing through our Application Lifecycle Management processes, we'll work hand-in-hand with your SAP partner to extend the reach of your ERP and bring your users and applications closer together.

Additionally, as part of our Advanced Security Suite, we've implemented Palo Alto Traps to secure your endpoints. The product has a sterling 100% success rate in enforcing network security and preventing cyber-attacks. This sophisticated software uses machine learning to automatically detect and respond to attempted attacks, stopping malware and ransomware in its tracks before they have the chance to get started.
